DETAILED ACTION

1. Applicant's response filed 12/6/04 has been received and considered.

Drawings

2. The drawing corrections filed 12/6/04 have been approved by the examiner.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 1-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over European Patent Application 1113186 ('186) in view of Namie et al. or Fischer et al..

Regarding claim 1 '186 discloses a shock absorber similar in structure to that of applicants. Note the similar valve assembly in figures 3 and 4.

'186 lacks a description of the threading of the bolt/nut 66,68 with respect to the winding of the coil 82.

However from the drawings it appears the nut of '186 rotates in the same direction as that of applicants which would seem to indicate the direction of the threading on the bolt is the same. However the winding of the coil is apparently different than that of applicants.

Art Unit: 3683

Both references to Namie et al. or Fischer et al. teach it is well known to use coil springs in a variety of applications which use coil springs with a left handed winding direction and opposite to the threaded fasteners mechanically connected to them.

One having ordinary skill in the art at the time of the invention would have found it obvious to have made the threading of the bolt of EP '186 opposite to the orientation of the winding of the coil spring 82, as taught by either Namie et al. or Fischer et al. to tighten down the spring with an appropriately threaded nut simply as an alternate equivalent arrangement to that shown or dependent upon the particular design of manufacturing equipment that is available to make the coil spring.

Regarding claims 2-6,13-18 due to the close similarity of structure between EP '186 and that of applicants these requirements are either met or simply an obvious variation of the valve assembly of '186 as can easily be seen in the drawings.

Regarding claims 7-12, in light of the modification above these requirements are met.

Response to Arguments

5. Applicant's arguments with respect to claims 1-18 have been considered but are most in view of the new ground(s) of rejection.

Art Unit: 3683

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christopher P. Schwartz whose telephone number is 703-308-0576. The examiner can normally be reached on M-F 9:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chris Schwartz can be reached on 703-308-3668. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-

free).
